

ECHOES main goals

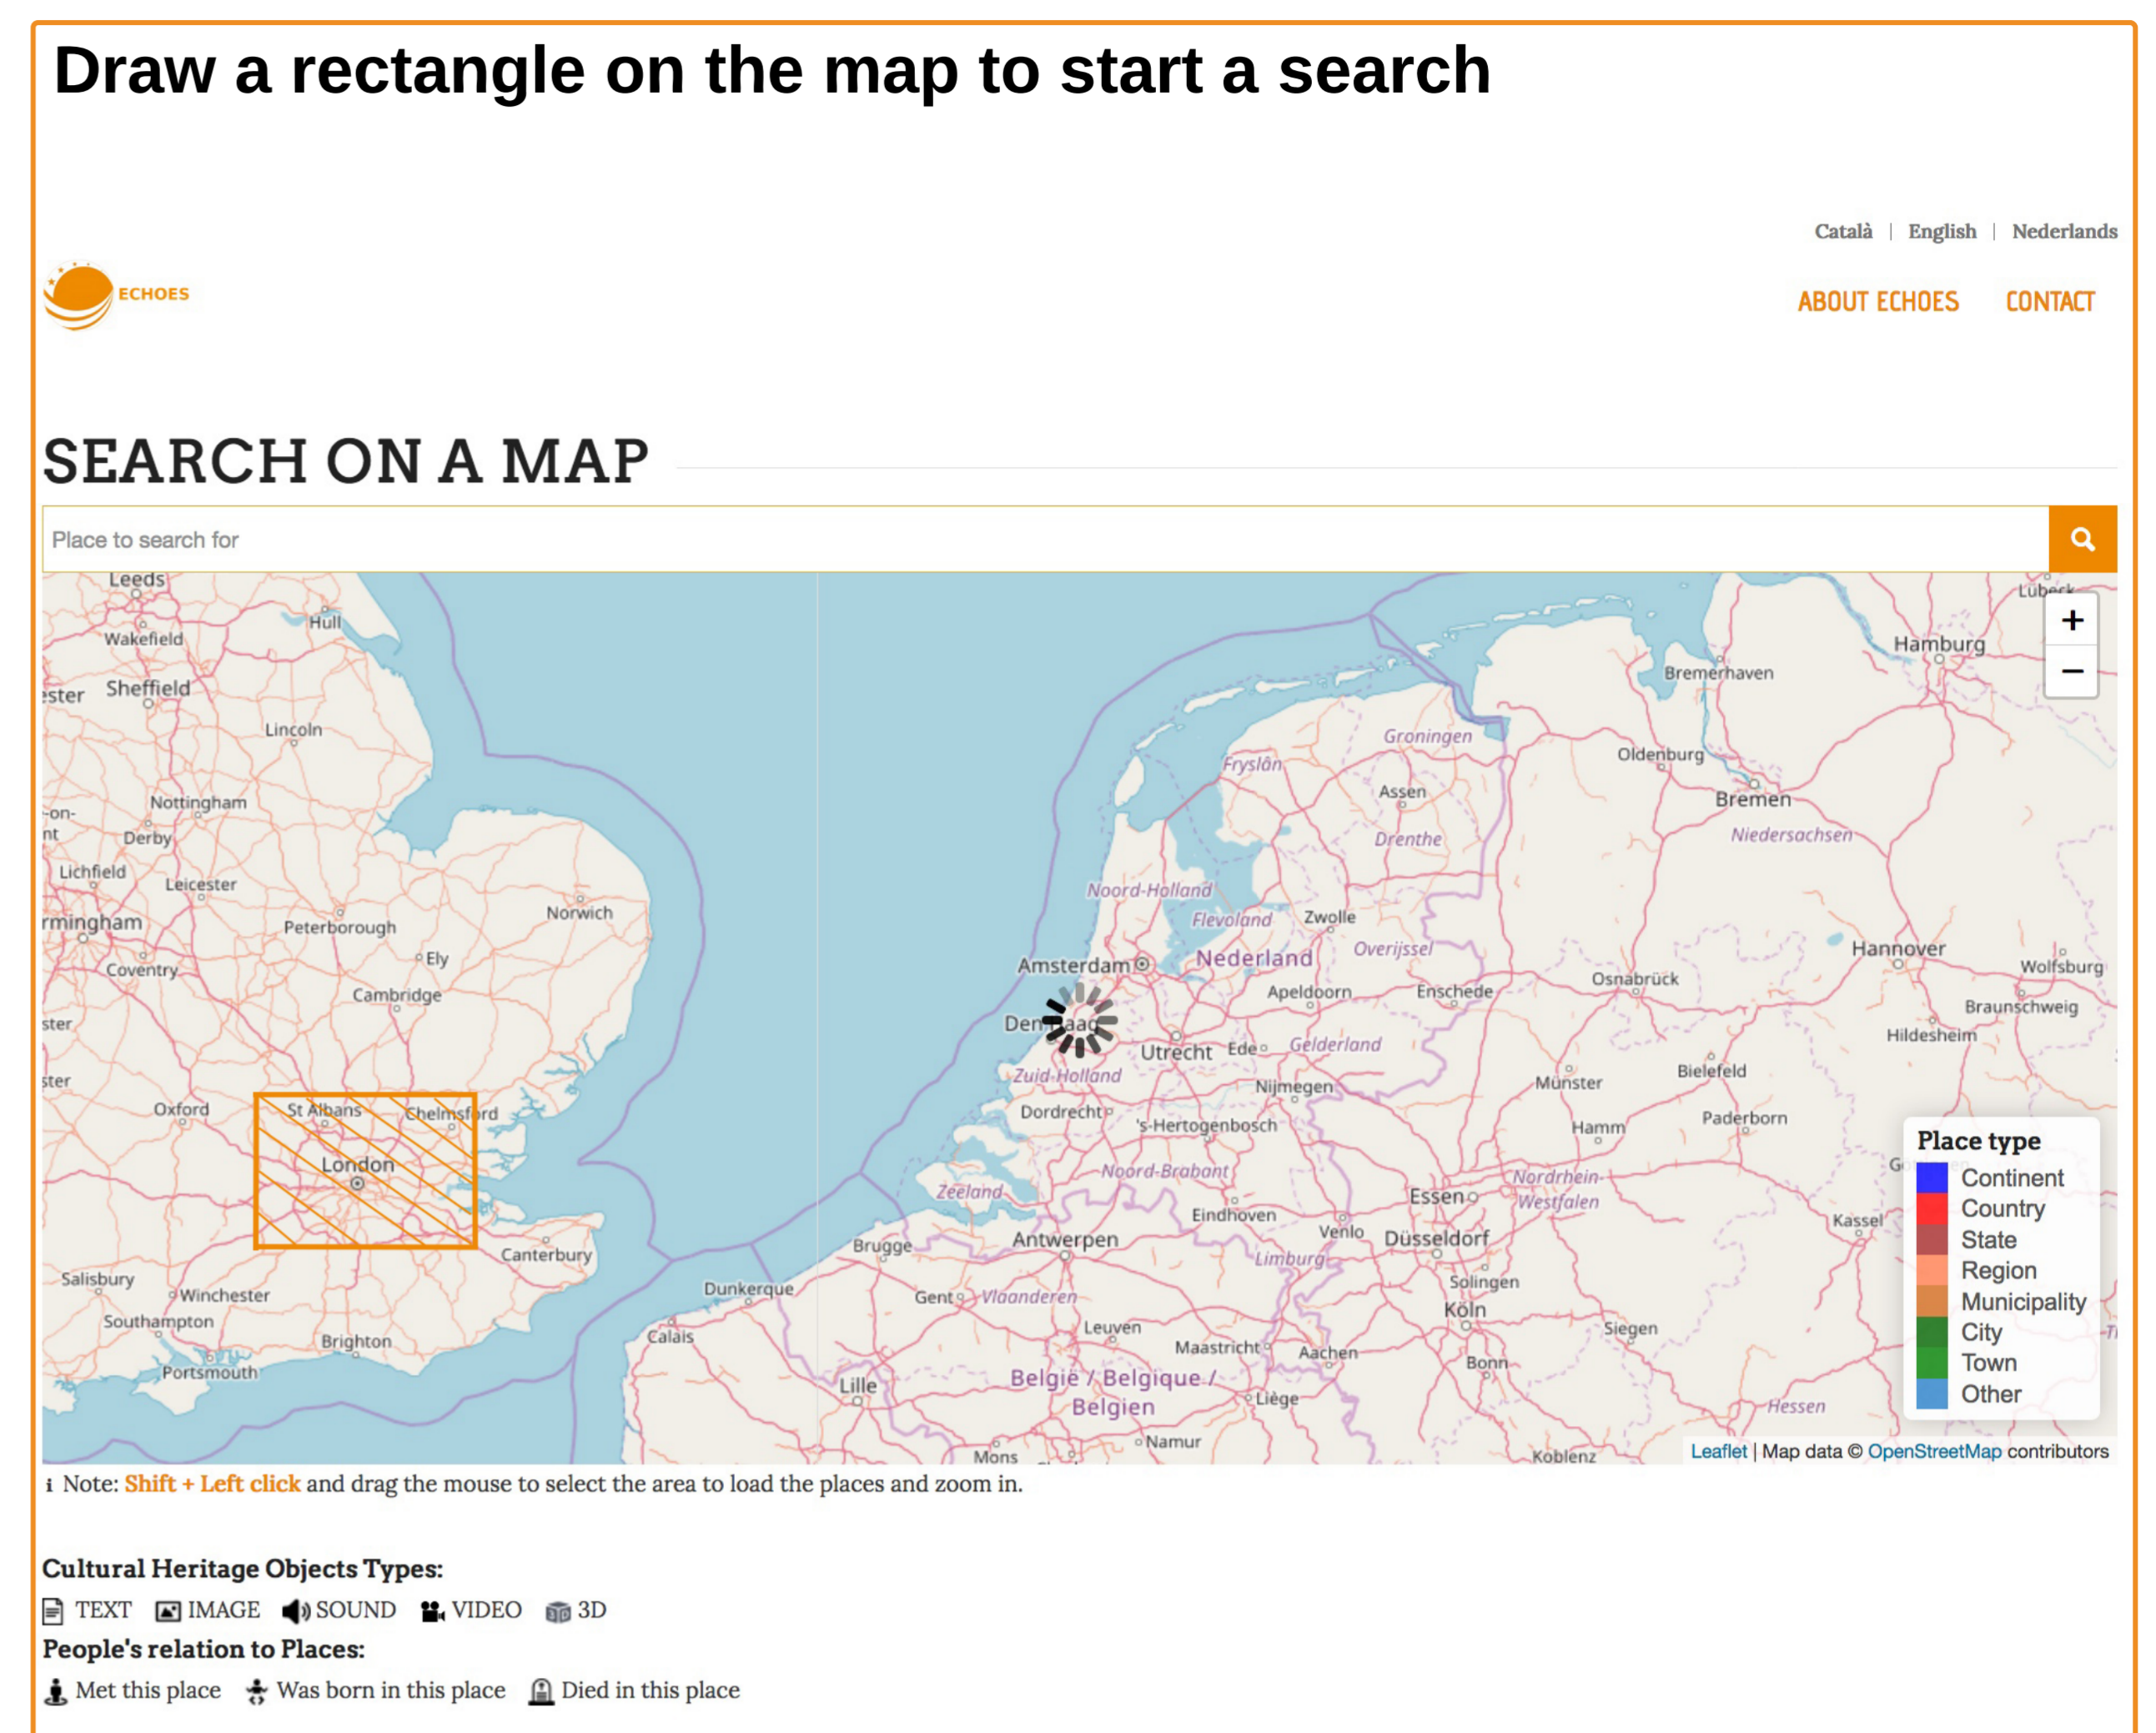

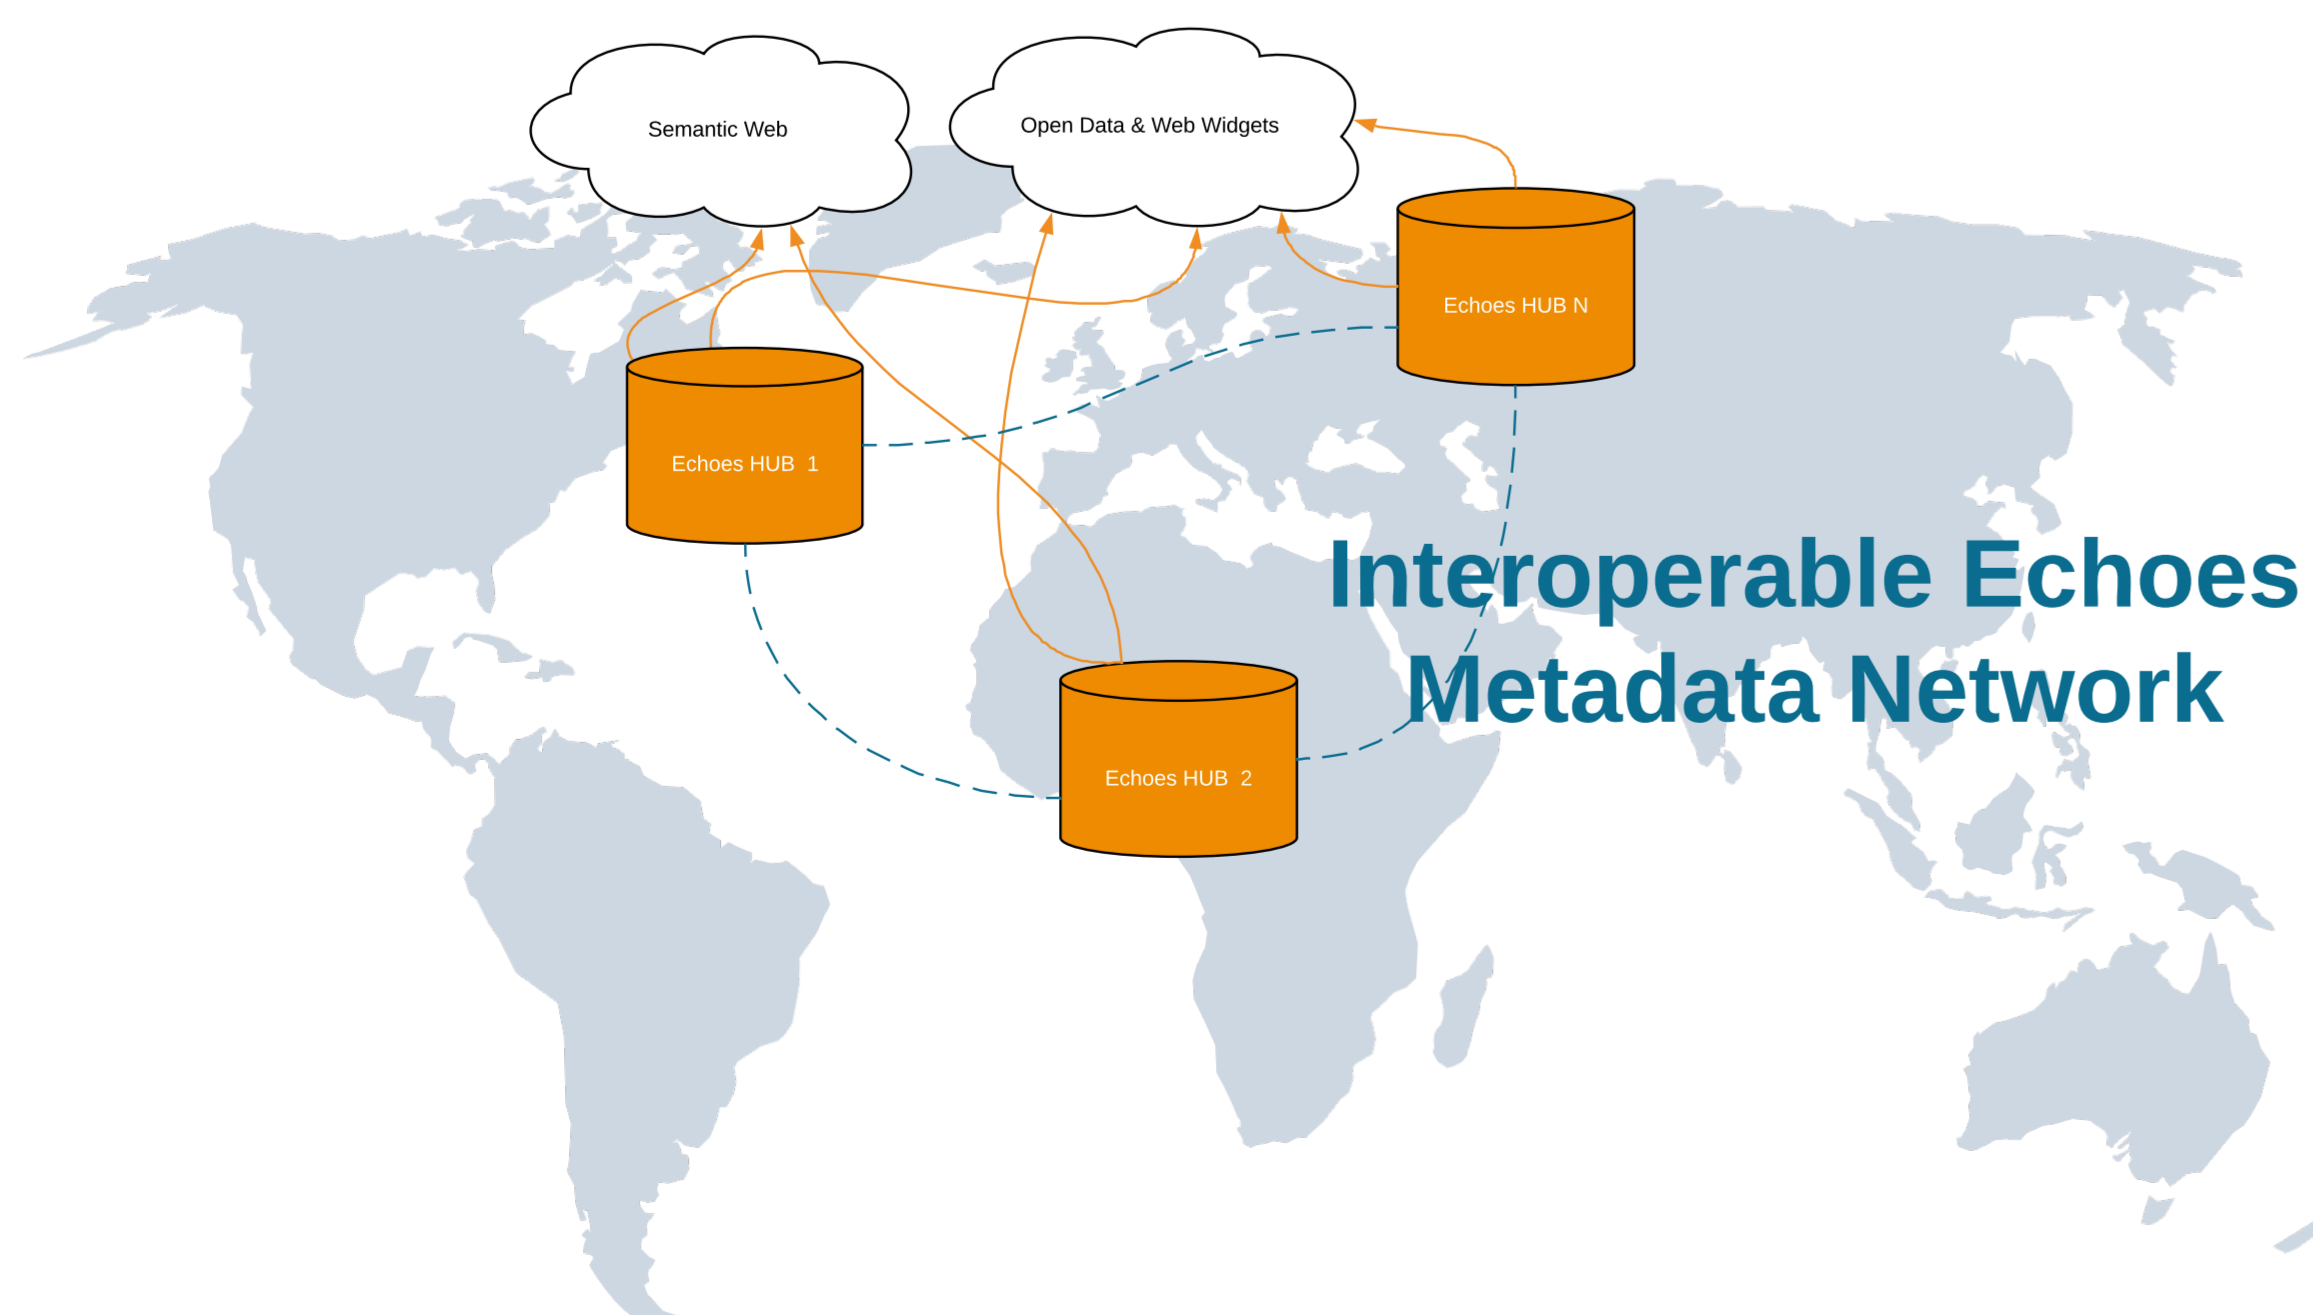

- Open your collections
- Link them to the world
- No messing up your databases
- Modular extensible architecture
- Innovate means of searching and displaying information

Design principles

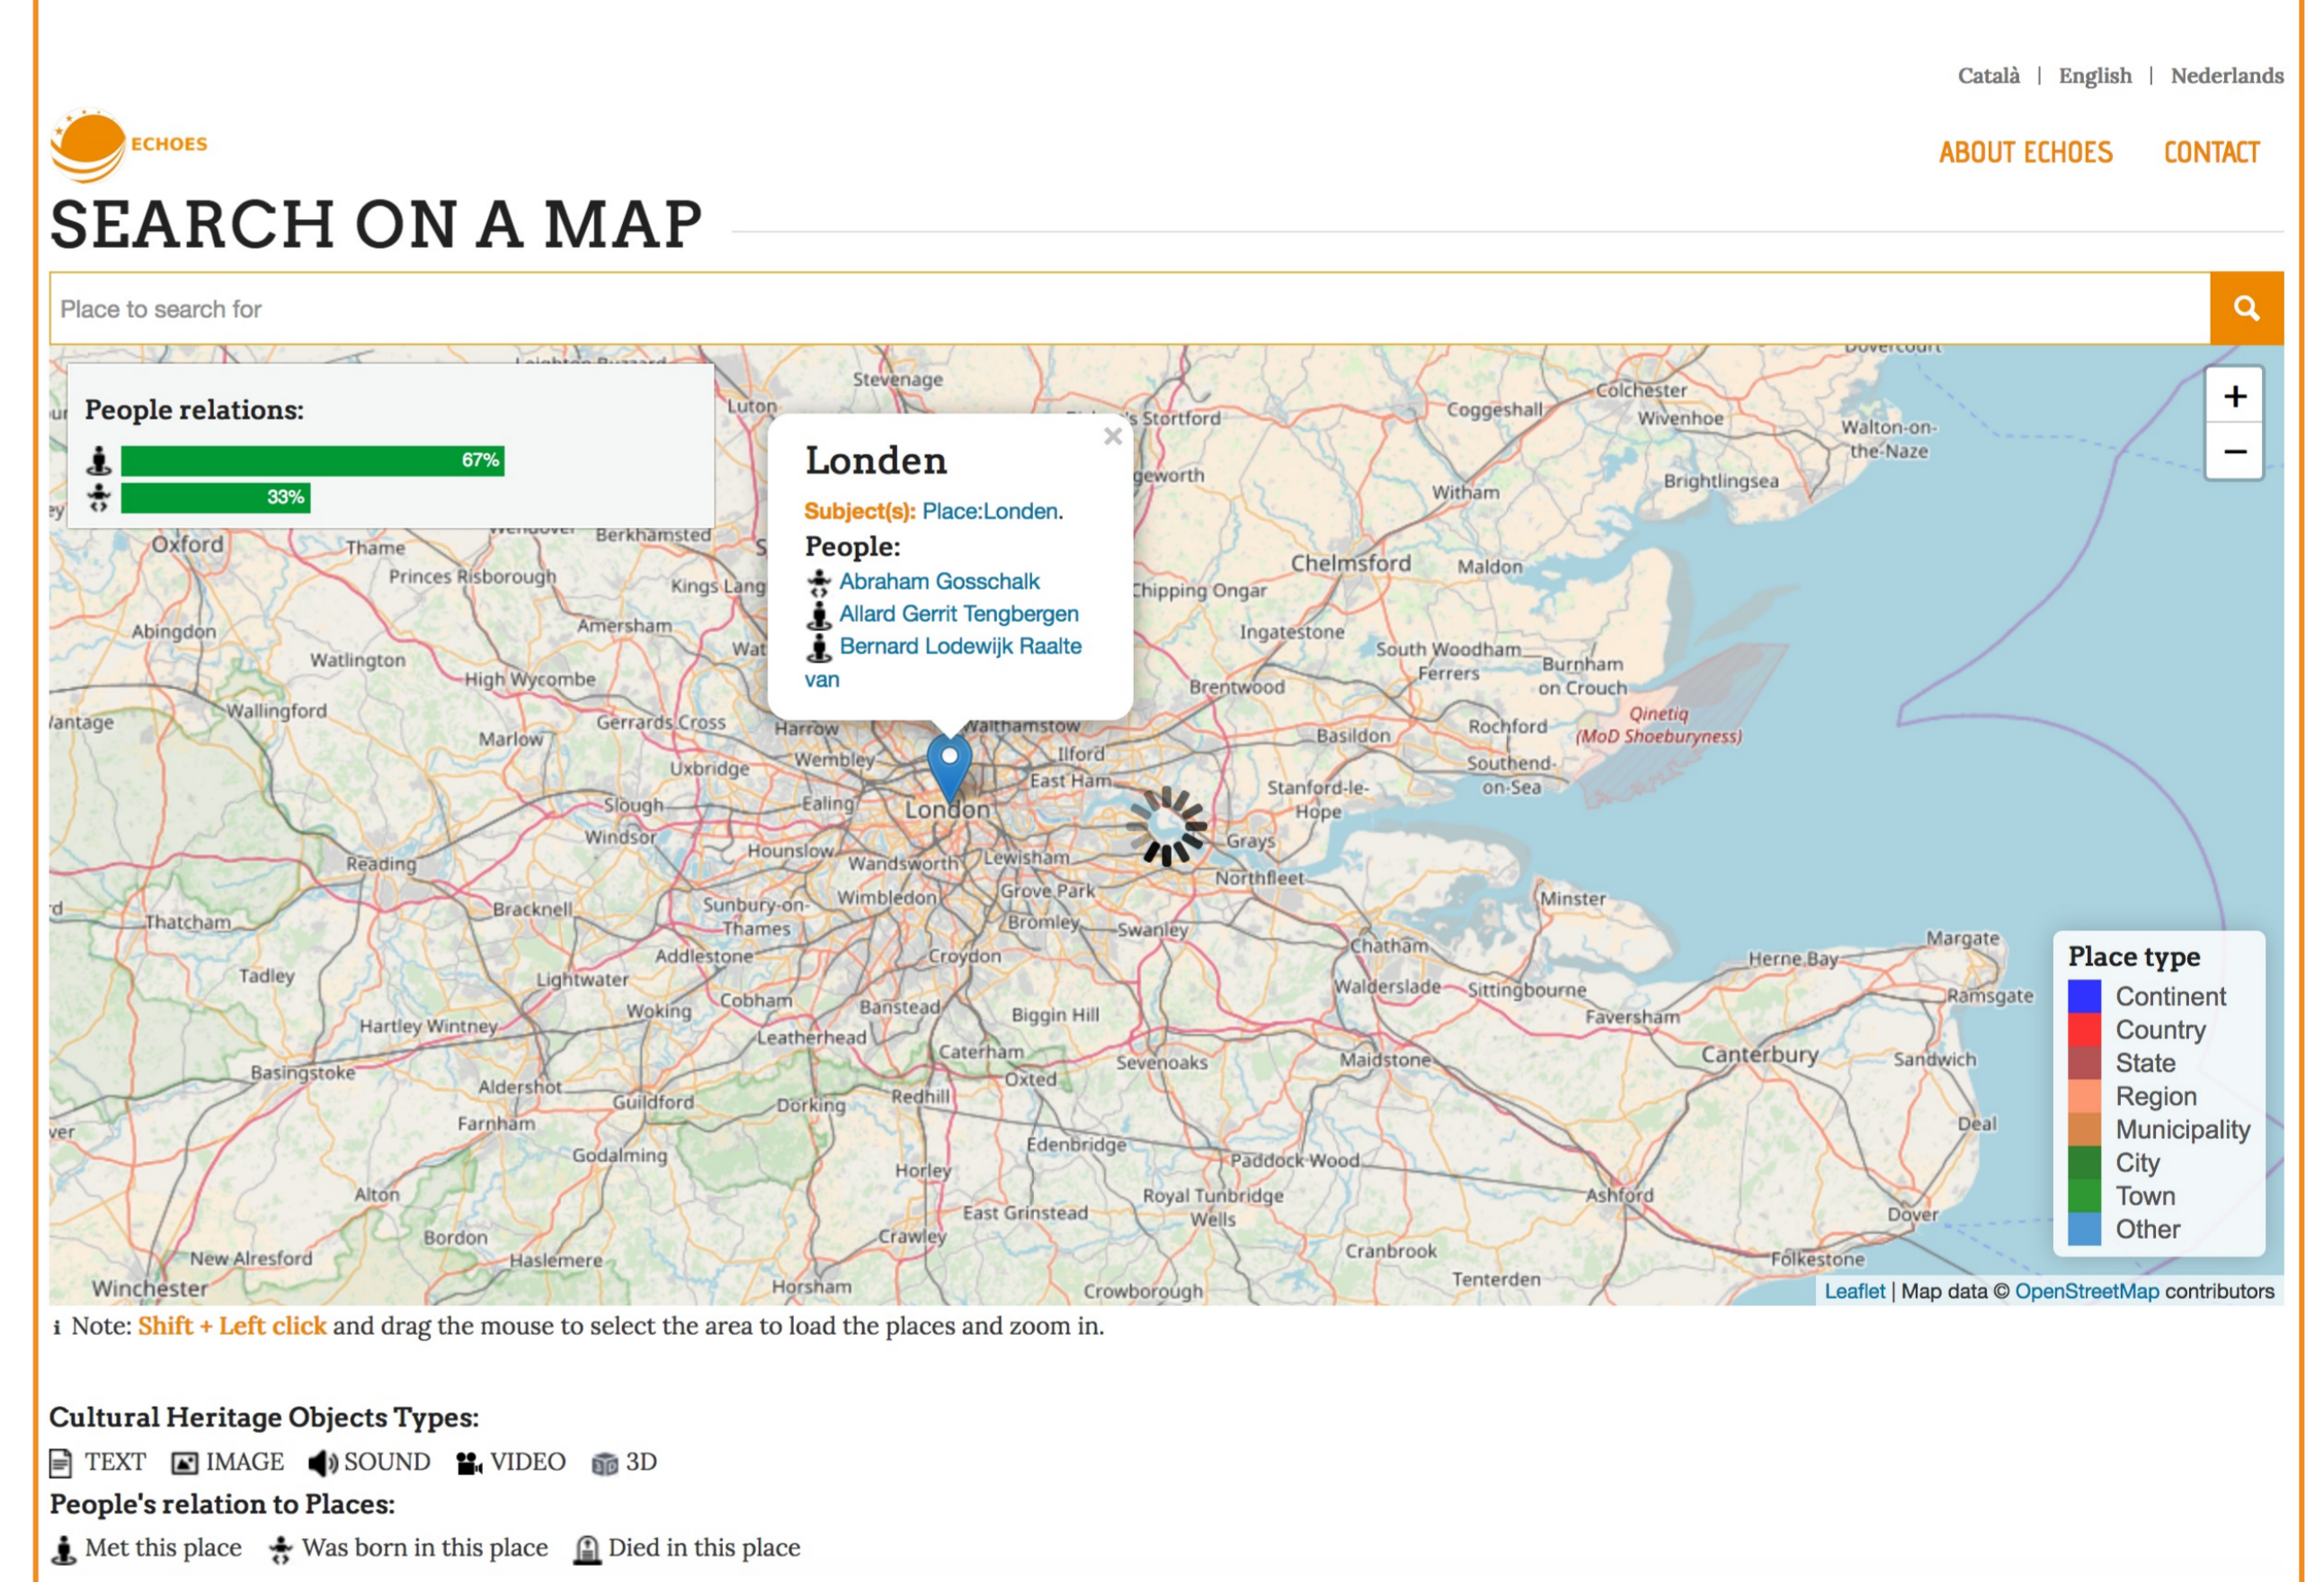

- Block by block approach
- Use EDM data model as standard metadata schema
- Data transformed to LOD/RDF triples
- Agile development
- User centered design

Prototype in 2018

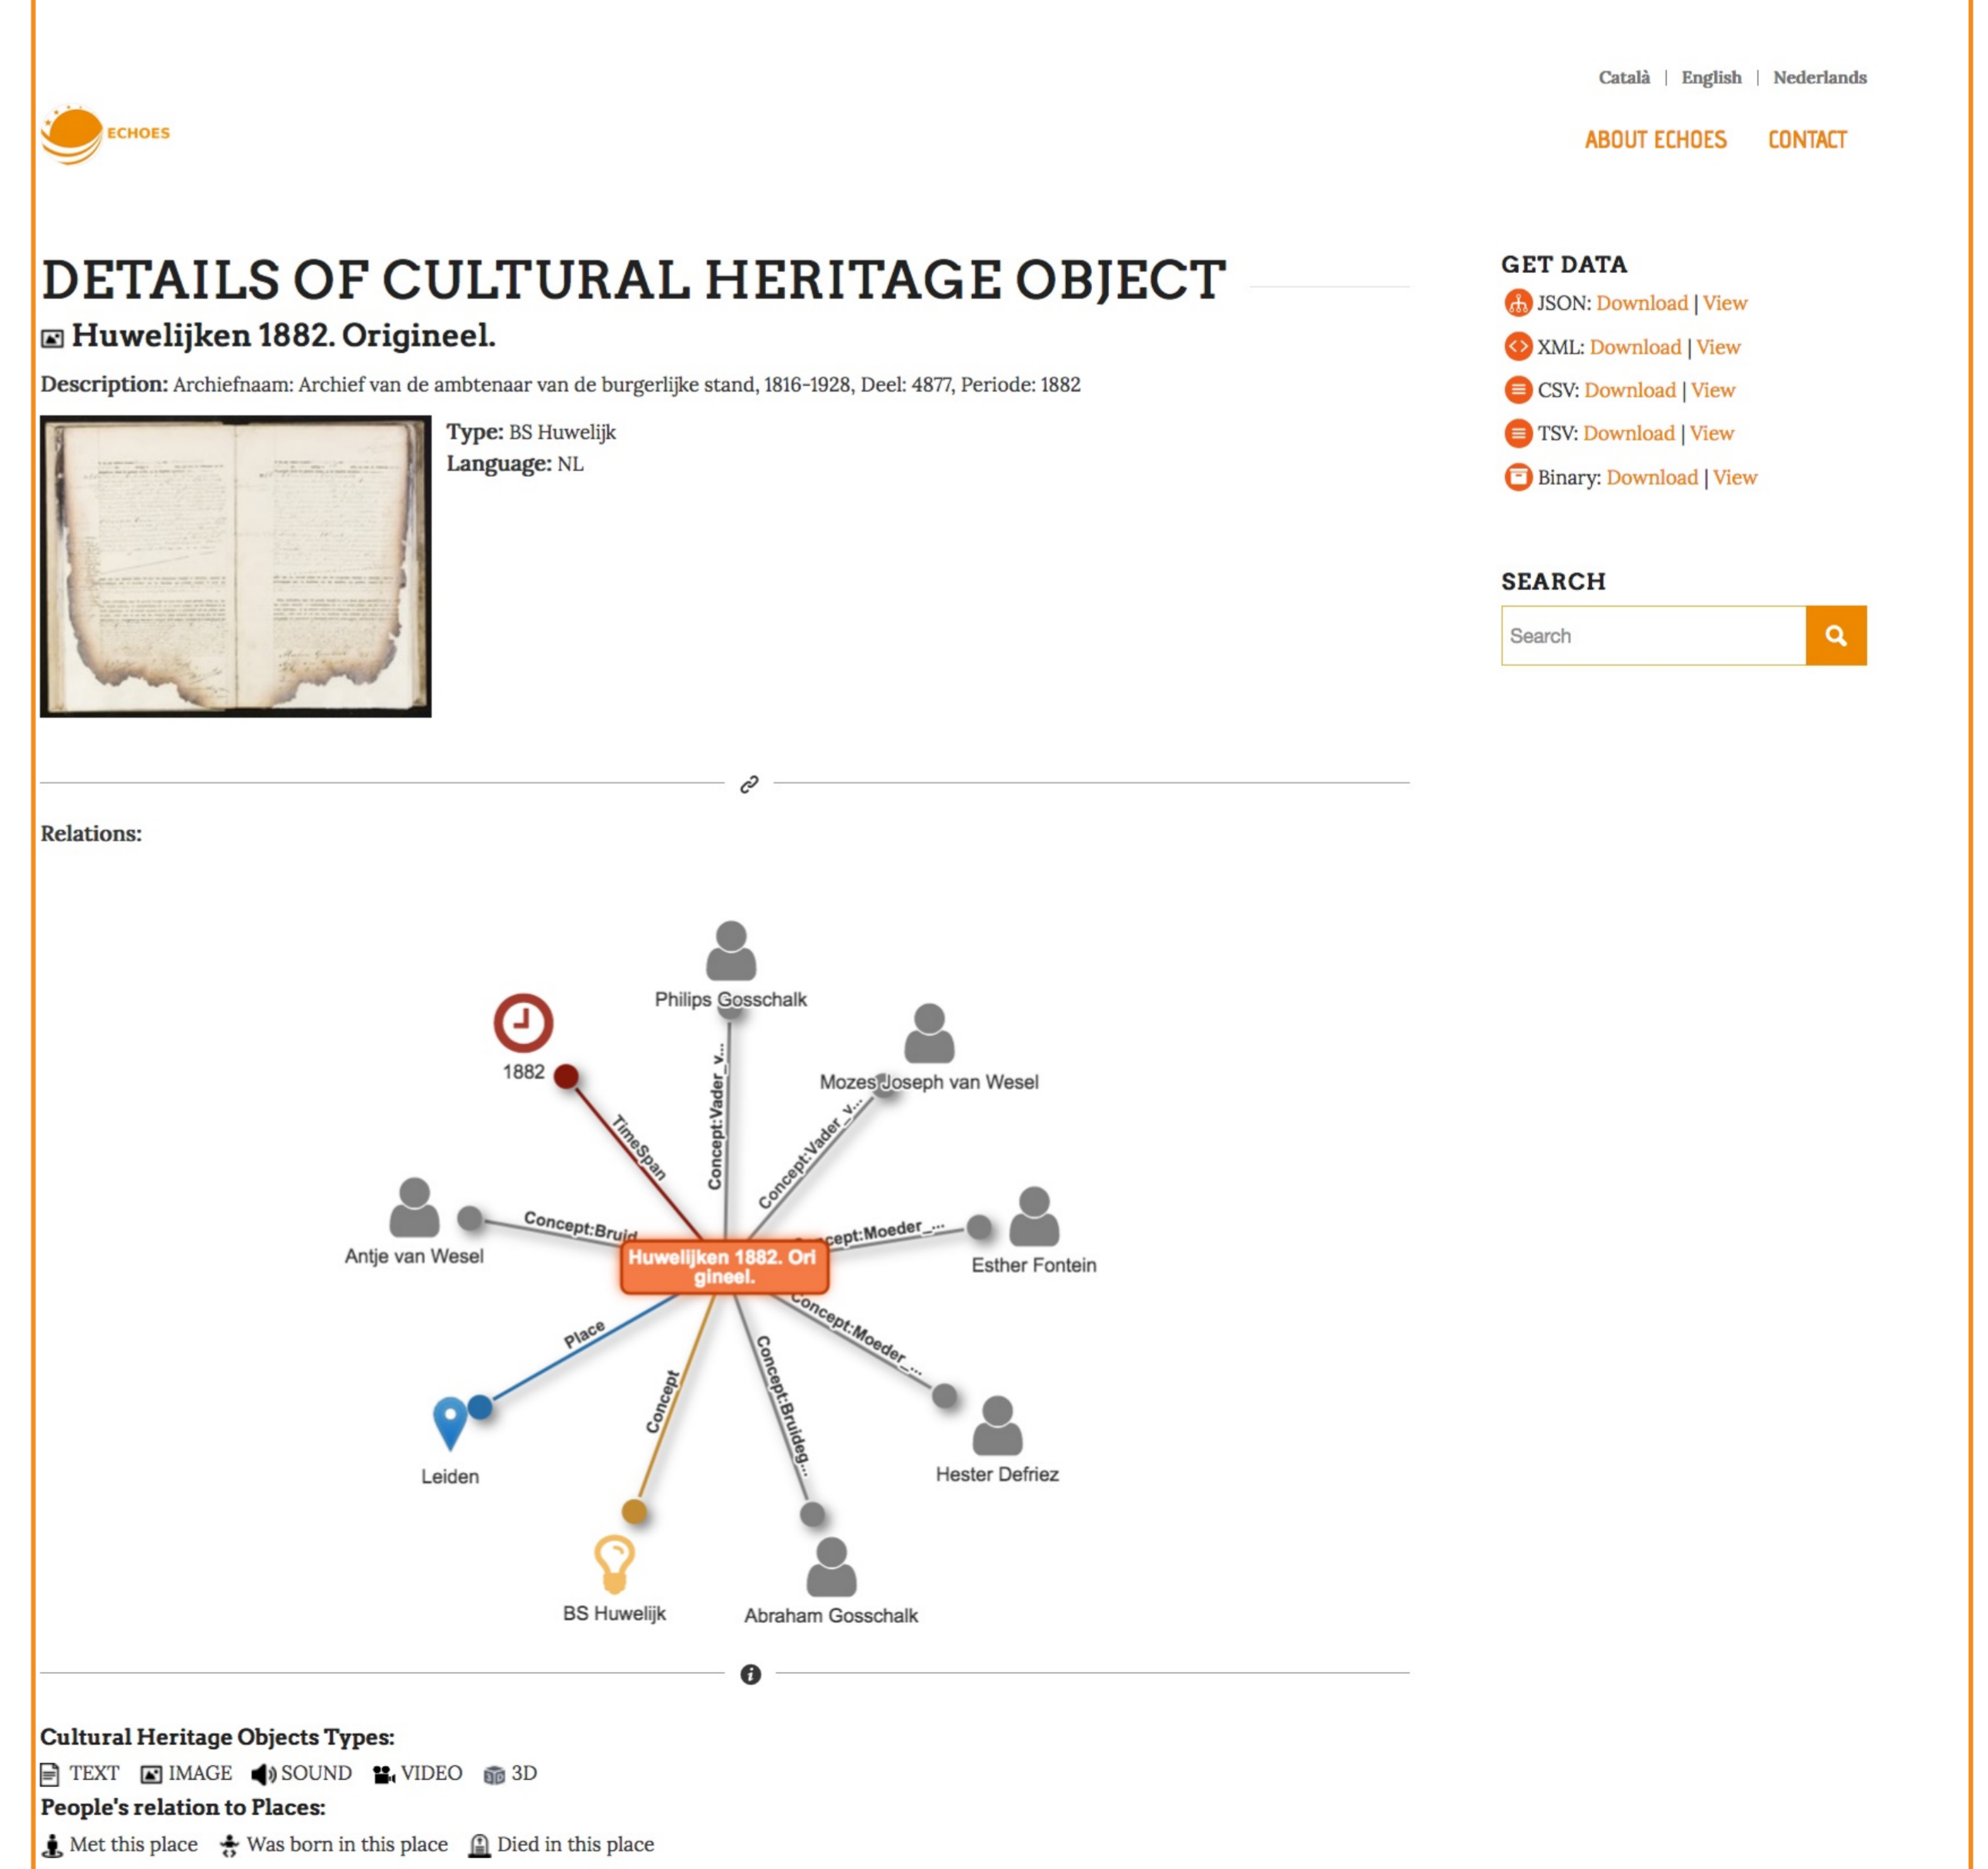

- Different data models
- Automatic enrichments
- Access and query data from website
- Use map as a search interface

The result of the search is shown like this
